A Journey of Discovery: From Ancient Roots to Modern Applications

Applications of Trigonometry

3. A building is 50 feet high. At a distance away from the building, an observer notices that the angle of elevation to the top of the building is 41° . To the nearest foot, how far is the observer from the base of the building? Round your answer to the nearest foot.

50

41°

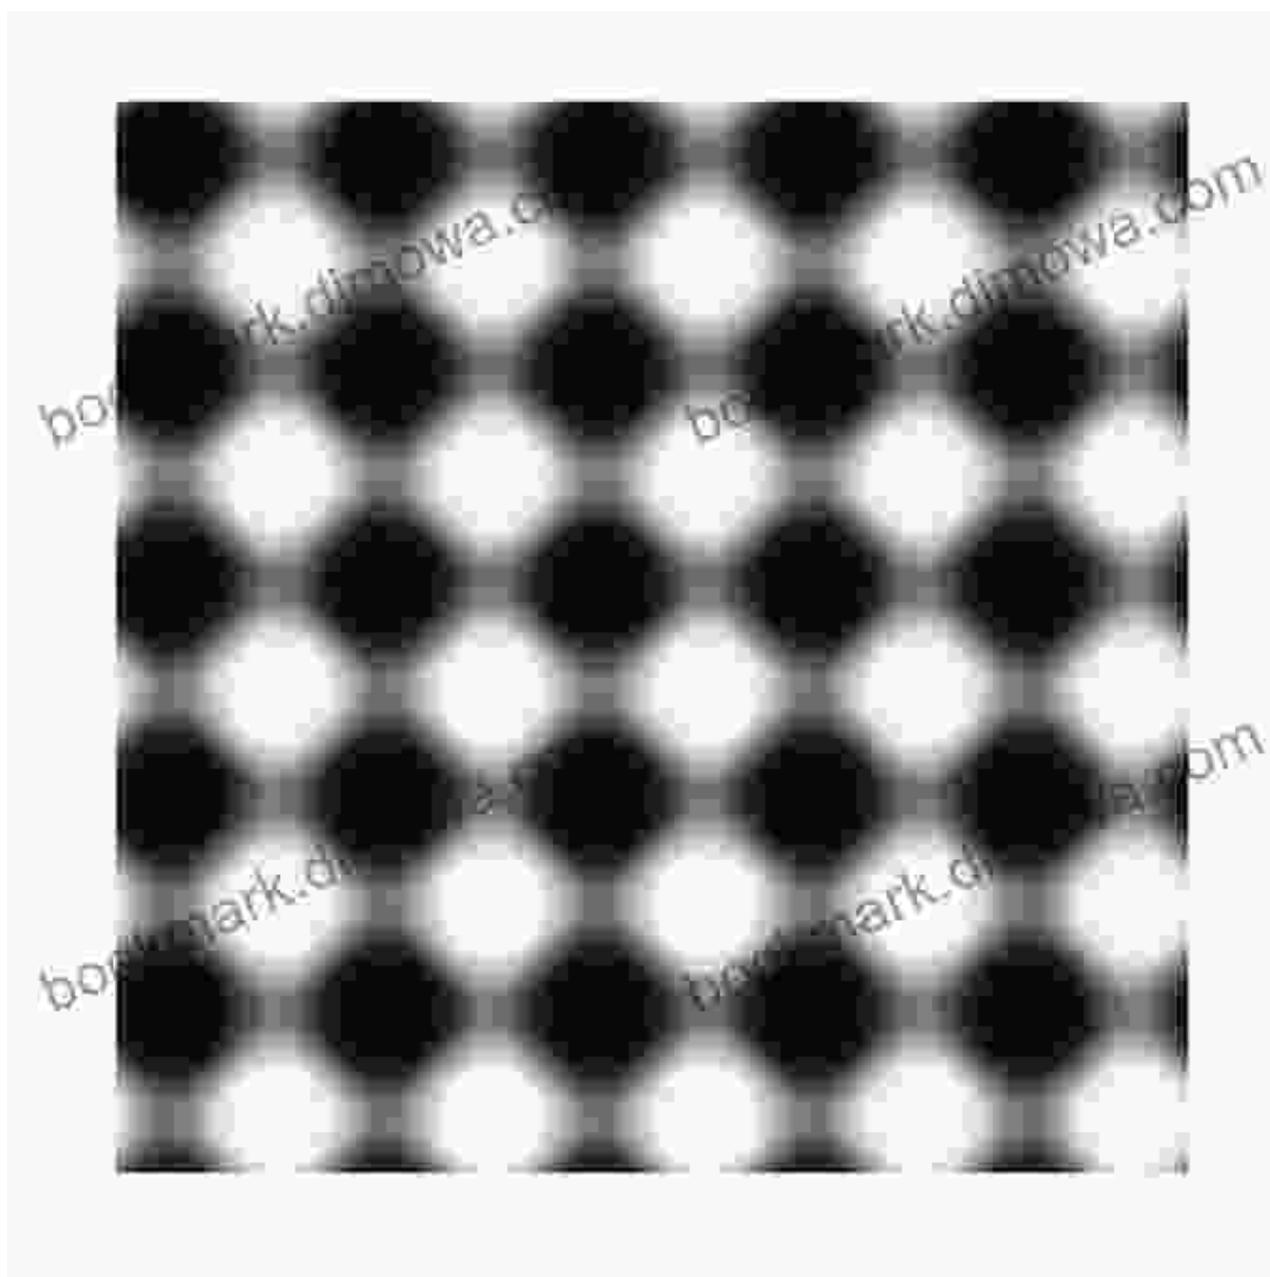

$\tan 41 = \frac{50}{X}$
 $X(\tan 41) = 50$
 $X = \frac{50}{\tan 41}$
 $X = 58$

The observer is 58 feet from the base of the building.
